Environmental risk prevention measures

1. Enterprise have established and improved the management system (health, safety and environmental management system) and strictly implement it.

2. We strengthened the safety and environmental protection management of the workshop, carried out safety and environmental protection education and training for the employees of the whole plant, and implemented the induction system. Specifically, smoking and other fireworks are prohibited in the factory area.

3. Regularly inspect the production units and equipment to reduce the probability of accidents, to ensure that the equipment does not have accidents during its life cycle.

4. Cofferdams has been set up in warehouses storing ink, developer, car wash water, and UV varnishing oil to prevent raw material leakage caused by rupture of storage tanks.

5. Set up hazardous waste room and solid waste room in the factory area to store waste.

6. Strictly implemented the norms and standards of China's relevant labor safety, environmental protection and industrial hygiene design, remove the hidden dangers of accidents at a minimum, and take effective measures to reduce the losses caused by accidents and environmental pollution in the event of an accident.
